## CLIPLANS SICO 4004: innovative short-circuit lance

The CLIPLANS is intended for the safest AHS class (Prevention/Elimination). This self-signalling short-circuit lance ensures the safety of field service operations. In simple and easy steps, you place a contact clamp on the base of both rails in the section that is to be secured, and then lock it. The signalling unit of the CLIPLANS then engages automatically and immediately performs a self-test.

### Easy maintenance

In order to simplify maintenance, we have used a minimum of unique parts. For example, you can charge the battery of the CLIPLANS with a multifunctional charger. You can also connect this to the cigarette lighter socket in your car. And we have given thought to reducing your maintenance costs; for example, you only need to calibrate the CLIPLANS once every two years.

### Compact

Every CLIPLANS has its own handy case. The dimensions (length x width x height) are 36 x 21 x 25 centimetres.

## Easy operation

We know better than most how important it is that the user is able to give his full attention to the safety of his environment. Therefore we designed the CLIPLANS in such a way that it is compact and lightweight, and delivers the optimum level of safety. If your company works with multiple clip lances, you will receive your own unique key. You can use this for all the lances within your own company. So no more searching for the right key.

## Long-life battery

With uninterrupted use of the CLIPLANS, the life of the Li-ion battery is guaranteed to be at least 52 hours.

## Multifunctional battery charger

Every Cliplans case contains a battery charger. You can connect it to the mains supply or to the cigarette lighter socket in your car.

## Unique key

Your CLIPLANS comes with a key that fits all the clip lances in your company. Every company gets its own unique key.

*“At last, and end to all the lugging around! Not only do I have more room in my car, but the CLIPLANS is also much easier to work with.”*

**Monitor signalling**

The signalling unit gives you a clear signal when it's positioned correctly and warns you if it's positioned wrongly.

## Advantages of CLIPLANS:

- ▼ **Compact**
- ▼ **Lightweight**
- ▼ **Unique universal key**
- ▼ **Long-life battery**
- ▼ **Multifunctional battery charger**
- ▼ **PSSSL-suitable**
- ▼ **Independent system**
- ▼ **Monitor signalling**
